Three factors are influencing the development of logistics professions: new information technologies, cost rationalisation and the outsourcing of production. Companies are looking for experts in global logistics, capable of managing financial and information flows.

The **European Master's in Logistics** develops management skills and the ability to work with Supply Chain players. By the end of the course, students will be able to analyse the business environment and make recommendations that will facilitate their integration into the professional world and the application of their acquired knowledge.

### LEARNING OUTCOMES

- Analyse, organise and optimise flows
- Manage the key processes in a global supply chain
- Optimise management of partner networks
- Set up a planning system at tactical and strategic level
- Measure the impact of logistics actions on financial performance
- Master project management and change management practices
